

Dream Fund

A dream-first companion that shows what you can safely spend and how close you are to the goals that matter.

2026 · UX Research · UI Design · AI Prototyping

☁ The Problem with Traditional Budgeting

Most budgeting apps focus on the past. They track every expense, trigger financial guilt over small joys, and fail to show if your dreams are actually on track.

- Tracking expenses feels exhausting and judgmental.
- Income and must-pay costs change every month.
- Emergency savings and goals compete in people's heads, not in one plan.

✨ Product Idea (The Solution)

Dream Fund puts your dreams first. Instead of tracking past mistakes, it looks forward. Set your essentials once, lock your emergency savings, and smart-allocate your income across your goals with total control. Instantly see your guilt-free spending money alongside live progress on your dreams.

Shifting your mindset from “Where did my money go?” to “Can I still achieve my dreams?”

User Persona

Jennie Kim — The Dream Chaser

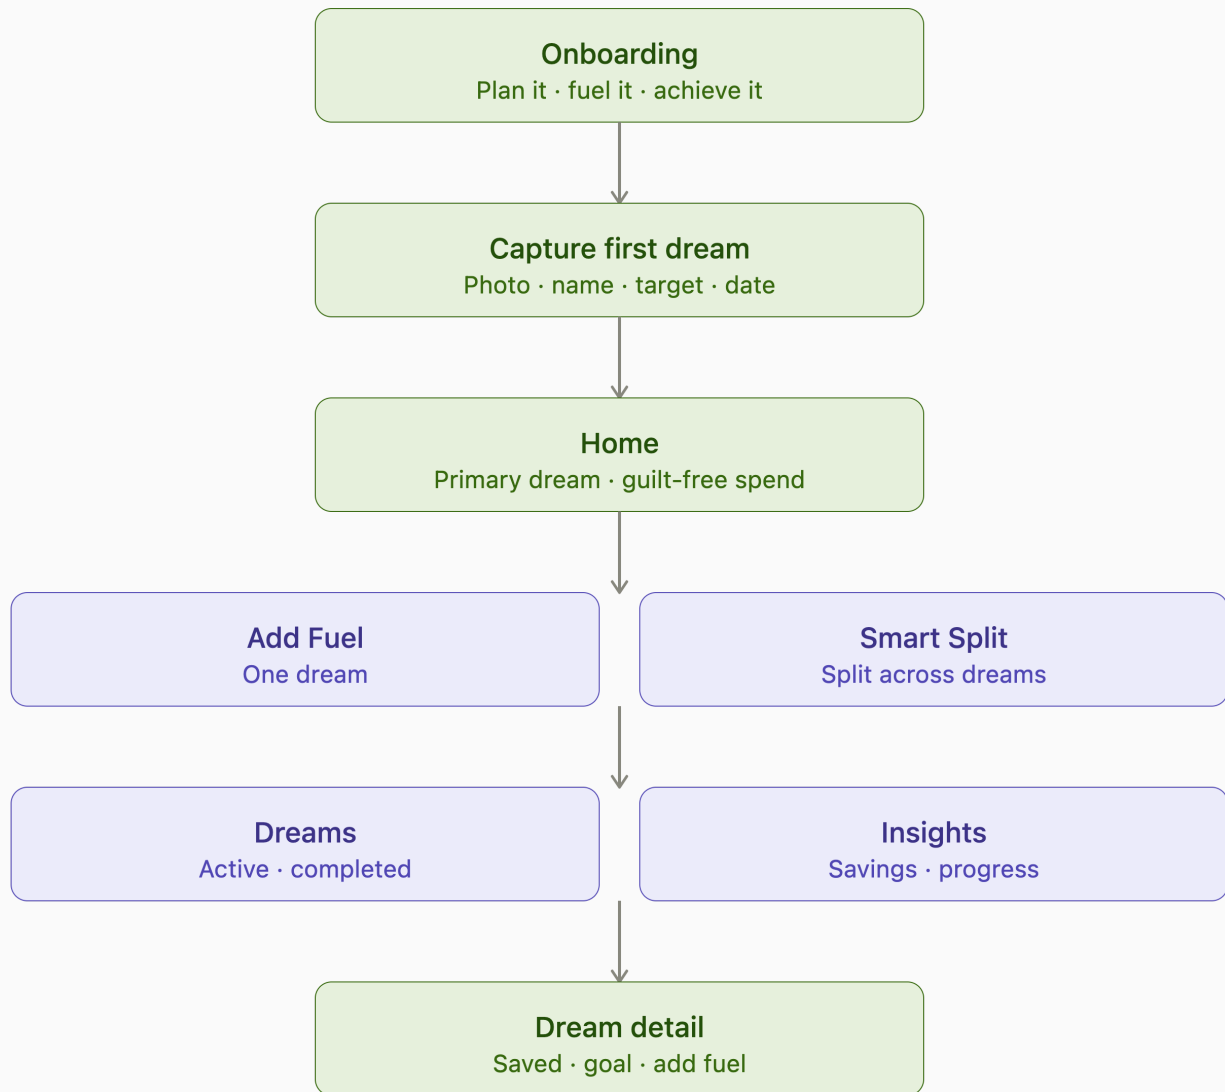

Age 28 · Marketing executive · Tokyo, Japan · ¥600,000 ~ ¥800,000 / month

Busy professional with variable income. She pays her bills but postpones trips and purchases because she never feels confident spending.

“I don't want to budget better. I want to achieve my dreams.”

User flow

The v1 prototype follows one calm loop — plan, fuel, check progress.

Green = core flow · Purple = feature actions

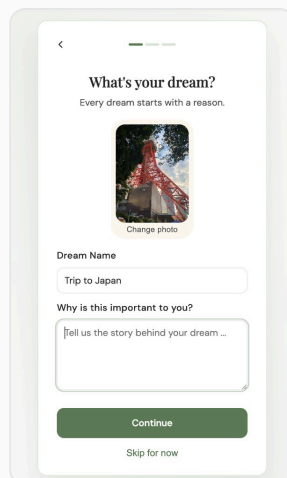

UX principles

- **Dreams first** — Screens show what you're working toward — not a ledger of mistakes.
- **Confidence over guilt** — One safe-to-spend number and gentle progress, not red warnings.
- **Lightweight updates** — Fuel and smart split replace daily category tracking.
- **Celebrate harvests** — Completed dreams are visible wins, not afterthoughts.
